PROFESSIONAL SUMMARY

Applied AI Engineer with 13+ years of software engineering experience, now focused on building scalable, secure AI agents and agentic workflows. I design and implement intelligent multi-agent systems that automate complex software-development workflows — from code generation and testing through deployment and maintenance — integrating LLMs via the Model Context Protocol (MCP) and reusable Claude Skills. This builds on deep expertise in Java 17, Spring Boot, NestJS, microservices, AWS and Kubernetes, delivered across renewable energy, smart metering, logistics and real estate. I bridge AI research and functional business applications, advocating for smaller, specialized, tool-centric AI.

CORE SKILLS

AI / Agentic	Agentic Workflows, Multi-Agent Systems, Model Context Protocol (MCP), Claude Skills, LLM Orchestration, AI-assisted development
Languages	Java, J2EE, Python, Scala, TypeScript, NestJS, SQL, PL/SQL, C
Frameworks	Spring Boot, Spring Security, Spring REST, Hibernate, Angular, JUnit, Apache Camel, Apache NiFi
Cloud & DevOps	AWS (Lambda, S3, EC2, SQS, CloudFormation), Docker, Kubernetes, Helm, Jenkins, Git, Bitbucket, CI/CD
Data & IAM	PostgreSQL, MongoDB, Oracle, MySQL, Keycloak (OAuth2 / JWT)
Architecture	Microservices, Event-driven (SQS/SNS), SOA, REST, Design Patterns, SAFe Agile / Scrum, TDD

EXPERIENCE

Applied AI Engineer

Vaisala · Finland · 2026 — Present

Vaisala Oyj

- Design and build scalable, secure AI agents and agentic workflows that automate software-development tasks end-to-end — code generation, testing, deployment and maintenance.
- Architected a multi-agent system for a microservices platform where agents coordinate, communicate and orchestrate services to improve reliability.
- Integrate LLMs through the Model Context Protocol (MCP) and reusable Claude Skills to give agents real tooling and grounded context.
- Built a free AI code-review assistant for Bitbucket Server, driven by a single markdown file, producing automated inline pull-request comments.
- Bridge AI research and functional business applications; advocate for smaller, specialized, tool-centric AI in engineering.

Senior Software Developer

Vaisala · Finland · 2023 — 2026

Vaisala Oyj

- Designed and developed secure, high-performance Java 17 / Spring Boot and NestJS microservices for renewable-energy SaaS on AWS and Kubernetes.
- Contributed to system architecture and design decisions; implemented security with Spring Security and Keycloak.
- Drove code quality through automated testing (JUnit, integration tests), code reviews and CI/CD pipelines.
- Mentored junior developers and collaborated with cross-functional teams and non-technical stakeholders.

Senior Software Designer / Software Designer / Senior Software Engineer

Landis+Gyr · Finland & India · 2018 — 2023

Landis+Gyr Oy

- Served as Scrum Master in a SAFe Agile framework — daily stand-ups, PI planning (ADO, Stormboard) and team alignment.
- Delivered across the full SDLC for smart-metering platforms: requirements, design (sequence/component diagrams), development, testing and maintenance.
- Worked in a TDD environment with Git, Jira, Jenkins and Gradle; led code reviews and technical documentation.
- Mentored developers and supported high-quality delivery through peer review and guidance.

Senior Software Engineer / Software Engineer

ARX Analytics & Advisory · India · 2016 — 2018

Arx Tech-AXS Pvt. Ltd.

- Designed high-level and low-level architecture as technical architect — technology integration, workflow definition and security layers.
- Led development teams, defined technical tasks, mentored developers and aligned delivery with architectural vision.
- Bridged communication between developers, project managers and business analysts, translating requirements into technical solutions.

Java / J2EE Developer

Iipseity Group · India · 2013 — 2016

Iipseity Group

- Participated in all phases of the SDLC — analysis, design, development, testing and deployment — based on functional requirements.
- Developed UI components and business logic, integrated multiple frameworks, and resolved post-production issues.

EDUCATION

LANGUAGES

B.Tech, Electronics & Communication Engineering
Uttar Pradesh Technical University,
India

- 2008 — 2012 · Coursework in embedded systems development.

Hindi	Native / Bilingual
English	Full professional
Finnish	Elementary
